

Cleaning of A/C evaporator

with Contra Sept® A/C cleaner
& 19210 pressure cup gun

Important advice

- Please use cleaning instruction from vehicle manufacturer, if available!
- Please shake the bottle before using
- Cleaning with Contra Sept® needs no further water to flush the evaporator!
- Before starting to work, turn off ignition, fan and A/C!
- Electronics within the cleaning area need to be protected from moisture!
- Specified points on pressure cup gun need to be greased after every use!

Access to evaporator

- **Option 1:** The cabin air filter is located in the interior, between fan motor and evaporator:
→ Dismount the cabin air filter and clean evaporator through cabin filter air box.
- **Option 2:** The cabin air filter is located in the engine compartment or in the interior, in front of the fan motor:
→ Check if temperature sensor or fan resistor is near the evaporator. If so, please remove.
Clean evaporator through resulting opening.
- **Option 3:** There is no temperature sensor or fan resistor installed or accessible:
→ Remove fan motor and clean evaporator through air routing.
- **Option 4:** There is no temperature sensor or fan resistor installed on evaporator and fan motor cannot be removed:
→ Drill about 20mm hole behind or before evaporator. After cleaning, close hole with suitable rubber plug or duct tape.

Cleaning process

1. Close air flaps for footwell.
2. Fill pressure cup gun with 1 ltr. Contra Sept® A/C cleaner. Connect with pressurised air system (maximum pressure 10 bar).
3. Insert probe in box through resulting opening.
4. Cover up filter box after insertion of probe to protect interior from overspray.
5. Place thumb on guide disk of the probe to set spray direction.
6. To clean, flush the evaporator and box, activate the gun and spray Contra Sept® side to side. The product und flushed out dirt will run down the condensation hole. Therefore place a drain pan under the vehicle!
7. The condensation hole need to be checked during cleaning! Only when condensation hole is dripping, clean mechanically.
8. Use complete content in gun.
9. Allow Contra Sept® A/C cleaner to take effect according to the cleaner's Service Information.
10. Blow through evaporator with empty gun and used probe for minimum 2 minutes.
11. Afterwards open all air flaps and turn on A/C for 20 min. on highest fan level. The A/C needs to be on medium temperature. Open all doors and windows.
12. Turn off A/C and vehicle.

Information: If the system is without cabin filter, clean out leaves and dirt with compressed air. Always replace cabin filter! Do not flush with water.
