

## Professional 187 System Agent Winter

Improves the cold start behaviour of diesel vehicles. The system agent has a positive effect on exhaust emission characteristics and combustion noise. Can maintain the function of diesel fuel and heating oil in cold conditions, as well as preventing faults due to paraffin separation and gelling.

### Properties

- ✔ Improves the ignition properties of diesel using an ignition booster
- ✔ Reduces fuel-related knocking
- ✔ Has a positive effect on exhaust emission characteristics and combustion noise
- ✔ Can keep diesel fuel and heating oil operational in cold conditions
- ✔ Product features suitable for end customers (child-safe closure mechanism, palpable warning notice, adapted hazard text)

### Application area

- ✔ For all diesel engines in the automobile and systems sector
- ✔ Improves cold start and cold running behaviour
- ✔ Improves operational safety, even in extremely cold conditions

### Instructions

Add to the fuel tank before the temperature reaches the limit of 0°C. Adding before refuelling ensures optimal mixing and effectiveness.

### Dosing

One can is able to improve the cold filter plugging point (CFPP value) with 150 litres by max. 6°C and with 60 litres by max. 12°C. One canister (5 litres) can improve the cold filter plugging point (CFPP value) with 2,500 litres by a maximum 6°C (mixing ratio 1:500) and with 1,000 litres by a maximum 12°C (mixing ratio 1:200).
