

Professional 373 Electronic Oil

Water-repellent synthetic oil. Secures the current flow on electrical contacts. Protects against contact fire and mechanical wear. Suitable for flat connector systems and gold-plated push-on contacts.

Properties

- ✓ Protects against chemical and electrochemical corrosion
- ✓ Prevents wear-inducing friction on contacts
- ✓ Fine coating on the contact surfaces with precious metals such as gold, silver, rhodium etc. are protected from abrasion
- ✓ Seals contacts against damaging external influences such as wetness, dust and aggressive ambient air
- ✓ Ensures secure and low-loss current flow
- ✓ Neutral against insulating varnishes and materials that are used in the area of electronics

Application area

- ✓ Plug connection in the engine compartment
- ✓ Diagnostic connector, bond earthing connectors, trailer socket, battery terminals, contacts behind trims
- ✓ Connections in the lower vehicle area such as ABS, ASR, EDL etc.

Instructions

Spray parts. After evaporation of the propellant gas (a few seconds) establish plug connection.
