

Professional 145 Cooling System Protection

Highly effective cooling system protection, works against all kinds of micro-leaks. For preventative use after every repair to the cooling system. Product remains in the system until the next time the fluid is replaced.

Properties

- ✓ Protects against leaks in the cooling circuit
- ✓ Permanently seals hairline cracks and micro leaks
- ✓ Guaranteed to keep heating valves and water pumps working
- ✓ Prevents seal transpiration and loss of cooling water
- ✓ Has no effect on rubber, plastics, light alloys or non-ferrous metals
- ✓ Suitable for all glycol- and glycerine-based anti-freeze

Application area

- ✓ Non-tight hose connections
- ✓ Transpiration-soaked head gaskets
- ✓ Hairline cracks in the radiator, cylinder head or engine block
- ✓ Water loss, wet cylinder liners to lubricant oil

Instructions

Add directly to the coolant circuit with a warm engine. After adding leave the engine running (at least 10 minutes) or carry out a test drive. Check coolant level, absence of air and leak tightness of the system.

Dosing

Sufficient for up to 10 litres of coolant.

Notice

- ✓ In the case of a contaminated cooling system, radiator cleaning with the cooling system cleaner MP 143 and refilling with anti-freeze or coolant is required.
