

## Professional 184 Particle Filter System Agent

The particle filter system agent is suitable for all diesel and petrol engines with standard or retrofitted diesel and petrol particle filters (excluding vehicles with their own additive system). Reduces the combustion temperature of the soot in the filter. Hence extends the regeneration interval, even in adverse driving conditions.

### Properties

- ✓ Reduces the combustion temperature of soot in the particle filter
- ✓ Allows the automatic combustion of the soot at lower exhaust gas temperatures due to unfavourable driving profiles
- ✓ Suitable for all diesel and petrol engines with standard or retrofitted diesel particle filters.

### Application area

- ✓ For preventative use after particulate filter cleaning with MF 931
- ✓ For preventative use for vehicles with diesel engines and particulate filter that are operated with unfavourable driving profiles (e.g. short journeys, stop and go)
- ✓ Also suitable for gasoline petrol particle filters.

### Instructions

Add the contents of the can to the fuel tank after every third tankful.

### Dosing

Starting filling level at least 10 litres.

### Notice

- ✓ Do not exceed recommended dose
- ✓ Not suitable for additive dosing systems

Product Description	Contents	Article Number	Packaging Unit
Particle Filter System Agent	100 ml	1103427	24 PCS

Shipment	Amount	Article Number
Particle Filter System Agent	1	1103669
Diesel Fuelling Hose Filler Neck	1	1601831
