

## microflex® 931 Particulate Filter Cleaner

Non-flammable, metal-free special cleaner for cleaning off soot and ash deposits in the particulate filter. Evaporates without leaving residue. The unique wetting properties enable the cleaner to loosen and clean off soot and ash deposits from porous honeycomb structures as are present in the particulate filter.

### Properties

- ✓ Particulate filter does not have to be dismantled for cleaning
- ✓ Minimises build-up of ash or soot in the particulate filter
- ✓ Neutral, ash-free formulation
- ✓ Dissolves carbon deposits in particulate filters
- ✓ Non-flammable and metal-free
- ✓ For removing deposits containing carbon from oxidation catalytic converters

### Application area

- ✓ For loss of performance or faults due to an overloaded particulate filter
- ✓ For restoring the absorption capacity of overloaded particulate filters
- ✓ As a preventative measure in case of an unfavourable driving profile

### Instructions

Refer to Service Information SI 931 before use. Spray the cleaner over the probe opening with the special probe in the direction of the particulate filter. Rinse with MF 932 after cleaning. Close the probe opening and allow the engine to run at idle speed for 15 minutes. Then perform the regeneration.
