

Professional 141 Intercooler cleaner

Improves the cooling performance of the charge-air cooler and rids the radiator of dirt from construction site and insect contamination, without needing complex removal. Protects against salt water and aluminium corrosion after cleaning.

Properties

- ✓ Optimal material compatibility thanks to the improved recipe (manufacturer release by BEHR)
- ✓ Prevents engine damage due to lack of cooling (due to the radiator being dirty)
- ✓ Saves time and money, as it is not necessary to remove the radiator
- ✓ Reliably and carefully removes objects such as construction site dirt and insects
- ✓ Provides protection against salt water
- ✓ With aluminium corrosion protection

Application area

- ✓ For external charge-air cooler cleaning (without removing the radiator)
- ✓ Also suitable for cleaning aluminium roller doors, aluminium tanks and aluminium rims

Instructions

Spray charge-air cooler cleaner with TUNAP 1800 high-pressure cleaner and suitable combination probe onto the radiator. Allow to soak in for 5 minutes and rinse with water. Refer to Service Information SI 141.

Dosing

Concentration in the ratio 1:50 (charge-air cooler cleaner and water).
