

microflex® 987 System Agent SCR

microflex® 987 System Agent SCR has been specially developed for regular use in SCR catalytic converter systems. The patented formula cleans urea dosing systems and prevents crystal formation, power loss and engine faults and ensures optimum functioning of the SCR system.

Properties

- ✓ Protects urea dosing systems and SCR catalytic converters from crystal formation
- ✓ Patent pending
- ✓ Cleans without interfering with urea solutions within its standard
- ✓ SGS-certified for compliance with Standard ISO 22241
- ✓ APL-tested
- ✓ No foaming when added to urea solution tank
- ✓ Suitable for use in compressed air-assisted dosing systems

Benefits

- ✓ Cleans urea dosing systems and SCR catalytic converters with compromised power due to crystal formation
- ✓ Simple dosing

Application area

- ✓ For preventative applications and for use in the event of crystal formation in urea dosing systems and SCR catalytic converters. This occurs when the required temperatures for complete conversion to ammonia are not reached.

Instructions

Squeeze the dispenser bottle to fill the dosing area of the bottle with the required amount of system agent. Add the measured quantity to the container/bottle containing the urea solution. Then add the mixture to the urea tank. Add the system agent regularly, at least every time the urea tank is filled.

Dosing

Refer to the scale in the dosing area of the bottle for dosing.

One bottle of 987 System Agent SCR (250 ml is enough for 100 l of urea fluid, 5 l container is enough for 2,000 l of urea fluid (dosage 1:400)).

The indicated dosage should not be exceeded.

Product Description	Contents	Article Number	Packaging Unit
