

TUNAP

3950 Finishing Resin

Silicon urethane acrylate adhesive for long-term sealing of surface splintering from chips.

Properties

- ✓ Higher tear resistance than the break resistance of the surrounding glass
- ✓ Permanently sealed against outside influences
- ✓ Resistant to road salts, oils, silicone, alcohol, sunlight, etc.
- ✓ No yellowing, greying or merging onto components
- ✓ Forms permanent connection which is fully resistant to external chemical and physical influences
- ✓ Free from corrosive, poisonous and carcinogenic additives

Application area

- ✓ On laminated passenger vehicle windscreens.

Instructions

Once the filling resin hardens after being applied to the chip damage, drop some finishing resin onto the residual impact until there is no more room. Apply finish film immediately and press on gently. Make sure there are no bubbles! Harden off finishing resin using the UV lamp.

Dosing

Lasts for approx. 30 applications
